

**Abstract****Components and their production**

5 The components of the invention comprise the following elements:

- a glass substrate (11)
- an organic light-emitting diode (12) arranged on said glass substrate (11), and

10 • a glass cover (13) which is arranged over the organic light-emitting diode (12) and is glued at the edge (14) to the glass substrate (11), said cover being produced from a glass plate by three-dimensional removal of material using a blasting method.
